CABLE INSTALLATION, LAYING AND SUPPORT PRODUCTS FOR OFFSHORE WINDFARMS

Slingco has developed a range of cable socks tailored for the renewable energy sector for use in:

- Cable installation – offshore and onshore
- Cable support inside wind turbines
- Cable management

WIND TURBINE CABLE SUPPORT SOCKS

These socks incorporate special features for wind turbines. With rounded copper ferrules, they offer reduced cable contact for high vibration environments while still allowing excellent working loads and cable support.

MARINE CABLE SOCKS

Our galvanised steel speciality socks are extremely heavy duty and suitable for large diameter underwater cable installation. Available in single eye, double eye lace closing and double eye, sizes range from 4 inches to over 20 inches. Manufactured to order.

LACE-UP CABLE SOCKS

Mainly used where a 'typical' cable sock can't be fitted over a connector at the end of a cable, our 'L-type' socks are used in pulling when the end is not accessible. The mesh is wrapped around the cable, then closed with the wire lace provided.
